PROFESSIONAL SUMMARY

Backend Engineer with two years of experience designing and shipping production APIs for multi-user platforms across Africa. Skilled in Python, Django, GraphQL, Node.js, NestJS, and PostgreSQL, with hands-on experience building payment systems, geolocation-based pricing engines, and scalable REST/GraphQL services. Currently building backend infrastructure for a multi-user healthcare diagnostics platform while leading backend development on a cross-border B2B eCommerce marketplace designed for intra-African trade.

SKILLS

- **Languages:** Python, JavaScript, C, SQL
- **Frameworks & Libraries:** Django, Django REST Framework, Django Channels, Node.js, Express.js, NestJS, Prisma, Graphene-Django, GraphQL
- **Databases:** PostgreSQL, SQLite
- **Tools & DevOps:** Git, GitHub, Nginx, Apache, Shell Scripting, Linux
- **Other:** RESTful API Design, JWT Authentication, OAuth2, Unit Testing (TDD), Redis Caching, Cloud Deployment, dbdiagram.io

EXPERIENCE

Labtraca

Nov 2025 – Present

Backend Engineer

Remote, Nigeria

Building backend API services for a multi-user healthcare diagnostics platform serving patients, phlebotomists, doctors, pharmacists, and lab scientists across Nigeria.

- Built a split payment endpoint enabling users to apply wallet balance first and charge the remaining amount to card, reducing checkout drop-off.
- Developed a full cart system with CRUD endpoints for adding, updating, and removing test requests, capturing user geolocation on checkout for distance-based pricing.
- Implemented location and distance calculation endpoints computing travel time and cost between a user's position and selected facilities, with geolocation fallback when no saved address exists.
- Built a checkout endpoint returning cart items, contact address, calculated distance, and travel info; and a confirm booking endpoint aggregating all final booking details.
- Developed an address update flow triggering backend recalculation of distance and total price whenever a user changes their delivery address.
- Implemented backend-driven search for tests, facilities, and packages to serve all results dynamically from the database.

Technology used: Python, Django, Graphene-Django, GraphQL, PostgreSQL, Paystack, JWT

Ubuntu Africa

June 2024 – Present

Backend Engineer

Remote, Nigeria

Building backend infrastructure for a cross-border B2B eCommerce platform designed for intra-African trade.

- Led backend development for a cross-border B2B eCommerce platform designed to facilitate intra-African trade.
- Designed scalable Django-based REST APIs for user authentication, real-time chat, and product listings.
- Introduced TDD practices, cutting debugging time by 20% and improving overall code quality.
- Integrated third-party payment gateways to facilitate seamless intra-African trade.

- Modelled and documented database schemas using dbdiagram.io, ensuring optimal data organisation and query performance.
- Built secure OAuth flow for third-party integrations, reducing unauthorised access by 99%.
- Integrated Redis caching and asynchronous tasks to enhance API responsiveness and reduce latency during peak hours.

Technology used: Python, Django, PostgreSQL, Redis, JWT, OAuth2, GitHub

EDUCATION

Osun State University, Osogbo, Nigeria In View (2027)

Bachelor of Science in Computer Science

ALX Software Engineering Programme 2024 – 2025

Intensive backend-focused software engineering programme covering system design, APIs, and collaborative engineering.

Federal Polytechnic Ede, Nigeria 2019 – 2022

National Diploma in Computer Science

PROJECTS SUMMARY

Mini Wallet API • Backend Developer | Personal Project

- Engineered a production-style fintech wallet REST API using Express.js and NestJS, implementing JWT authentication, secure Paystack payment integration, webhook signature verification, atomic wallet transfers with Prisma transactions, real bank withdrawals with automatic refund handling, rate limiting, DTO validation, and interactive Swagger/OpenAPI documentation.
- Tech Stack: NestJS, Express.js, Node.js, TypeScript, Prisma ORM, PostgreSQL, JWT, Paystack API, Swagger/OpenAPI.

TimelyCare — Hospital Appointment System • Backend Developer

- Designed an appointment scheduling system for hospitals, streamlining patient booking and reducing scheduling conflicts for clinical staff.
- Built with Django, PostgreSQL, and REST APIs.

Daavi Special — Restaurant Management App • Backend Developer

- Developed a web application for restaurant order management, menu updates, and table reservations.
- Built with Django, PostgreSQL, and JWT authentication.

Inventory Management System

- A Django REST Framework API for managing inventory operations, including supplier and product management, incoming/outgoing orders with automatic stock updates, and full stock movement history. Secured with JWT authentication.
- Built with Python, Django, Django REST Framework, PostgreSQL, Gunicorn, and WhiteNoise.

Blog API

- A RESTful API supporting full CRUD operations for blog posts and comments, user authentication, and a follower/following system. Designed for scalability and easy integration into web or mobile applications.
- Built with Django REST Framework, PostgreSQL, and JWT authentication.

ADDITIONAL INFORMATION

Languages: English (Fluent)
